

STONEDEEKS

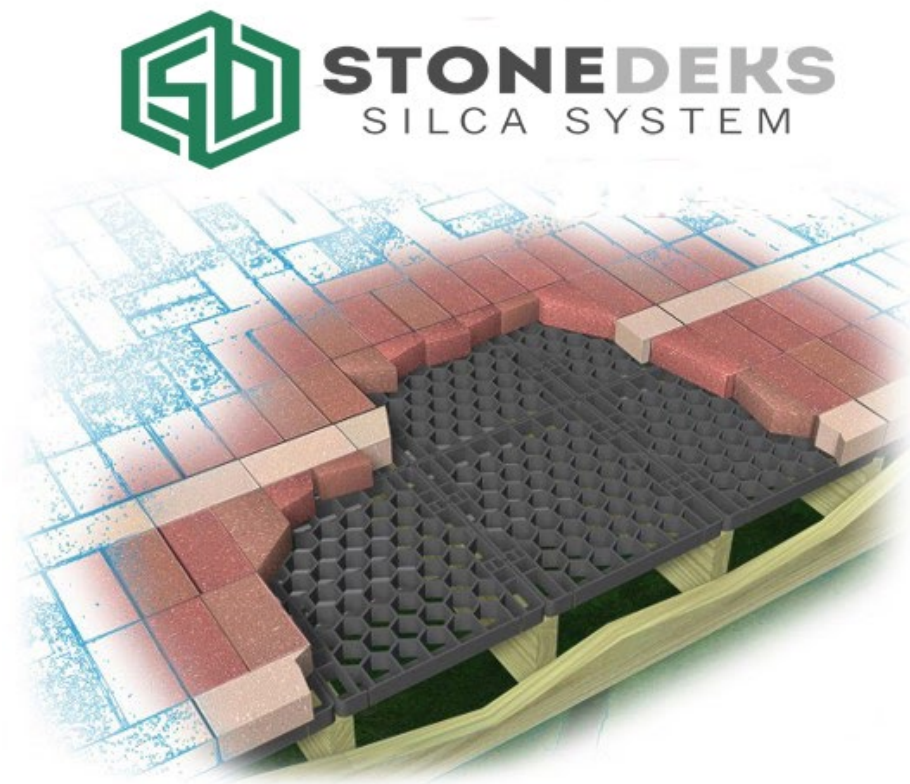

SYSTEM

What is StoneDeks System?

An underlayment for stone on elevated structures

The **Silca Grate** is manufactured in the USA to the highest standards

Supported by proven Engineering and Certified testing & evaluations

20-year Residential Warranty
10-year Commercial Warranty

Where do I use StoneDeks?

The following are examples of areas where you can save on labor and materials as well as offering the homeowner more options for their projects:

-  Elevated decks
-  Patios
-  Pool decks
-  Rooftops
-  Docks
-  Any elevated structure with 16" On-Center Joist framing

ADVANTAGES OF STONEDEKS SYSTEM

- Helps you get jobs and make profit
- Provides a **“good” (wood)**
“better” (composite)
“best” (stone)
option to the customer
- Works with any elevated system
- Non-proprietary system
- Reduced maintenance and increased durability
- Saves time and money

ADVANTAGES OF STONEDEKS SYSTEM

- Create tiers and stairs without backfill
- Eliminates settling
- Lets you match a deck or balcony to existing hardscape
- Match interior to exterior stone
- Complete jobs in areas with limited access
- Provides access to septic, water lines, and other utilities
- Fireproof surface

2026 IS STONED EKS SYSTEM'S 19TH ANNIVERSARY

- Has been installed in all 50 states in the US.
- Has been installed in 7 provinces in Canada.
- Is licensed and sold in Australia, New Zealand, the Pacific Islands, and the UK.
- Over 2 million square feet sold

Rooftop Installations

Rooftop Installations

Can be done by two methods

1. Use pedestals with joist supports and treated lumber or metal joists

- ❖ Use of joists on the pedestals reduces the number of pedestals required, and provides better support for the SilcaGrates and stone
- ❖ Follow the installation method suitable for the surface material chosen

2. Support each corner of the **SilcaGrate** on the **pedestal** and fasten with self-tapping screws

🏠 Number of pedestals needed to support each corner of the SilcaGrate will result in an increase material cost compared to using joists on the pedestals

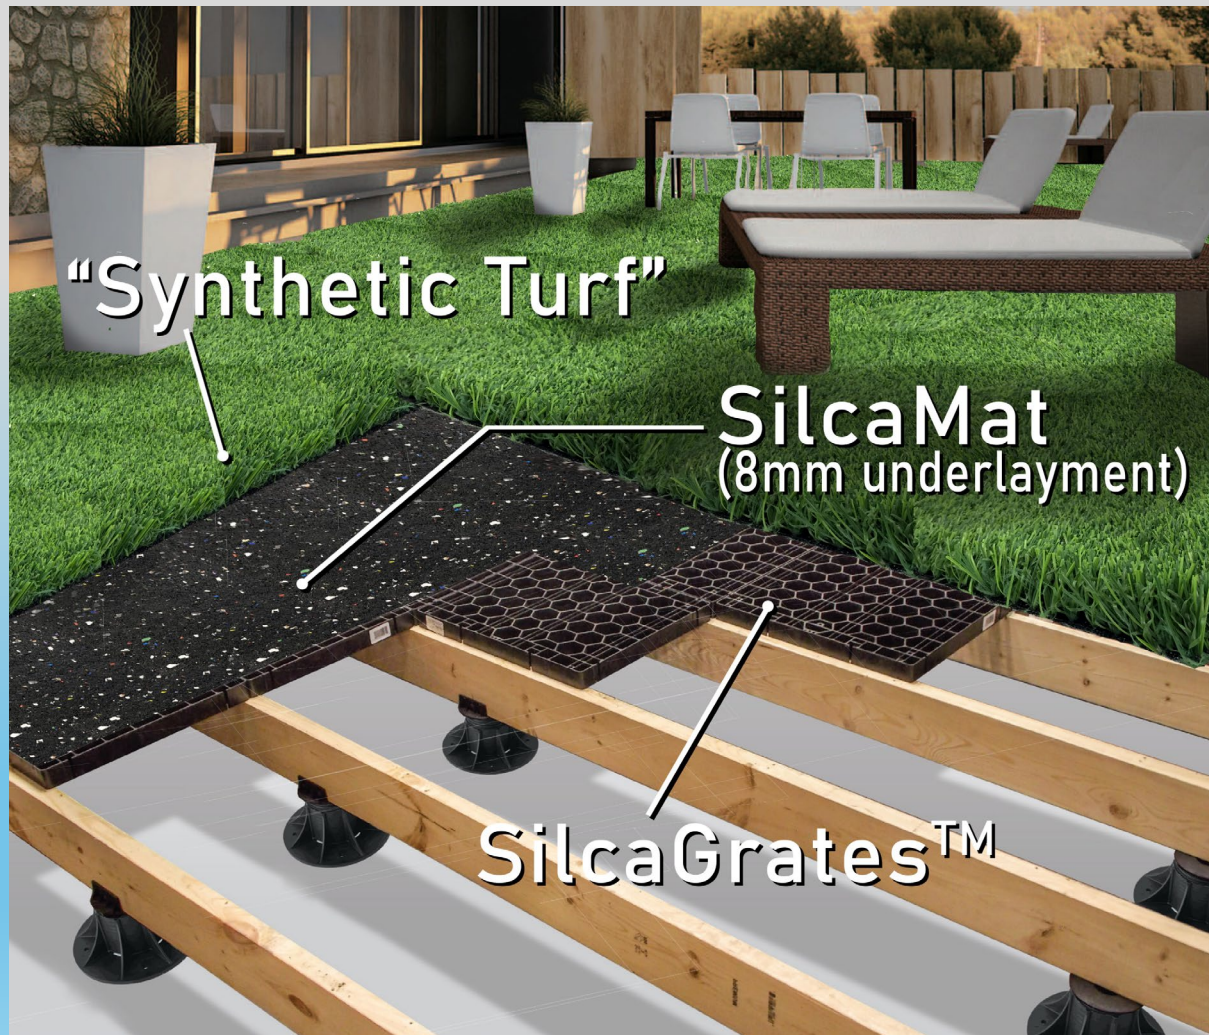

Overlay System:

The SilcaGrate™ can be installed with plastic or vinyl sleepers, ensuring proper pitch and level.

- Sleepers should be placed 16" apart and fixed with 2" screws, allowing a $\frac{3}{4}$ inch drainage gap beneath.
- Advantage: This system is ideal for areas with limited vertical space and is budget-friendly.

Artificial turf installation on decks or roof tops

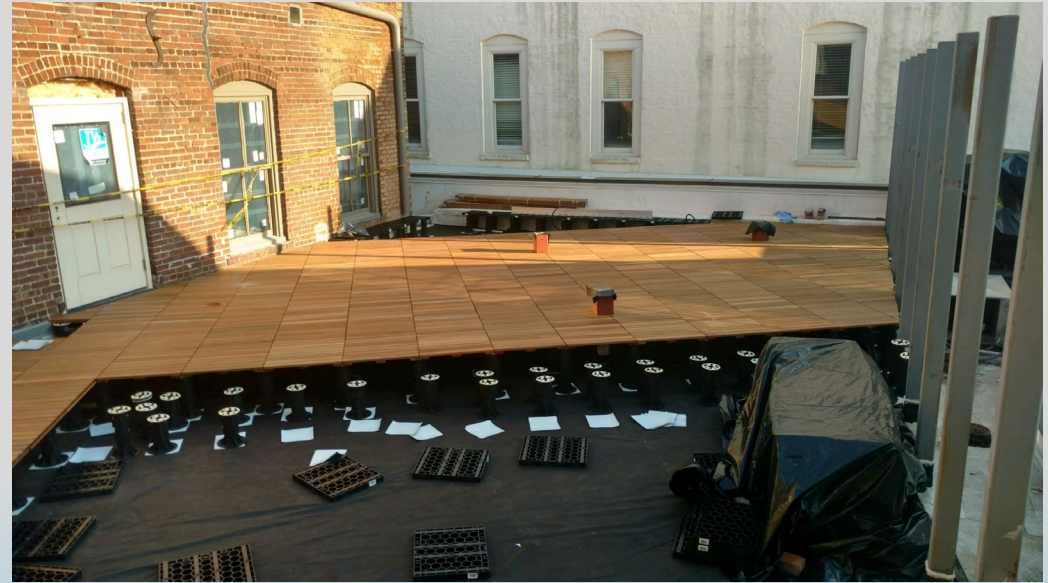

Installation of Artificial Turf

- SilcaGrates can be used to install artificial turf
- Apply 8mm SilcaMat underneath
- **A pedestal in the center of the SilcaGrate as well as pedestals supporting the four corners is required for the warranty to be honored** when dimensional lumber or metal framing is not used
- Uniform underlayment can be secured to the SilcaGrates™ with adhesive, and the artificial turf secured with adhesive or a mechanical fastener.
